

Ukraine races to close Russia's ballistic missile gap with homegrown FP-7 missile

Source: TOI_Top_Stories

In a decisive move to bolster its defense against Russian aggressions, Ukraine is on the verge of deploying its own ballistic missiles, specifically the FP-7 model, which can hit targets up to 200 km away. Additionally, the development of the FP-9 missile promises to extend reach and precision in targeting Russian military setups. This initiative marks a strategic shift towards greater self-sufficiency in military capabilities, reducing dependency on Western arms.
